

## **GigaTrust Connects the Best of Both Security Worlds – DLP and ERM**

### ***GigaTrust announces the availability of the GigaTrust DLP Protector and RMS plug-in for Symantec DLP***

**Herndon, VA — October 5, 2010** — GigaTrust, the market leader in Enterprise Rights Management (ERM) content protection software solutions that enhance and extend Microsoft's Rights Management Services (RMS), today announced product availability of the GigaTrust DLP Protector and GigaTrust RMS Plug-in in support of the Symantec Data Loss Prevention 10.5 solution.

According to Gartner, "Symantec Data Loss Prevention (DLP) continues to be the strongest overall enterprise DLP capability". The continually growing data loss prevention market has complimentary ties with ERM. Enterprises that use DLP to filter email traffic can automatically protect documents containing sensitive content with an RMS template without the need to involve the end user. The DLP discovery features that search across file servers or enterprise-wide desktops and laptops can invoke the GigaTrust RMS Plug-in to automatically protect infringing documents. Integrating Microsoft's RMS with DLP control provides enterprises with content that is not only protected at rest and in transit, but now while in use.

"Organizations want to extend their protection of sensitive data by leveraging their investments in enterprise rights management controls and combining it with data loss prevention," said Rich Dandliker, Director of Product Management at Symantec Corporation. "The integrated GigaTrust Plug-in for Symantec Data Loss Prevention provides content protection from Microsoft RMS using the policies and control of our solution."

The GigaTrust DLP Protector and the GigaTrust RMS Plug-in for Symantec Data Loss Prevention 10.5 link Microsoft RMS to Symantec DLP to leverage the existing investment and deployment of Symantec DLP in the enterprise as the use of Rights Management is launched and expanded inside and outside the organization. It is a total solution that ensures persistent content protection and data loss prevention.

GigaTrust DLP Protector and GigaTrust RMS Plug-in for Symantec DLP provide:

- Server-based plug-in in support of the Symantec DLP solution, which offers discovery at the client end-point, server, and network
- Seamless integration
- Connection between RMS policy and Symantec DLP Smart Response Rules
- Automatic protection of files that have been moved to a designated network file share for storage and redistribution
- Assignment of a unique protection policy to each file share with the option to include the share's subfolders

- Automatic application of templates—each template includes a list of predetermined users and RM rights which are then applied to all documents in the designated folders
- Examination of content to administer all functions, including Stop, Send, and Notification
- Flexible choice between blocking a file, allowing a file to pass through, or applying rights protection before a file is delivered

“Clients are looking for continuous and interwoven security solutions that offer full protection,” said Darryl Worsham, V.P. of Business Development and Partner Products at GigaTrust. “The GigaTrust DLP Protector and RMS Plug-in for Symantec DLP provides the seamless solution needed to bring together the leading RMS and DLP vendors in a more unified way.”

### **About GigaTrust**

GigaTrust is a leading provider of email security and content protection software products and services with customers in both the public and private sectors. GigaTrust is the only provider of the Intelligent Rights Management™ solution, which combines innovative next-generation content security technologies built on the foundation of Microsoft® Rights Management Services. In February 2003, the firm formed the first strategic partnership with Microsoft and formally launched the first in the family of proprietary Intelligent Rights Management products based on the Rights Management Services (RMS) security platform. GigaTrust is a Microsoft Gold Certified Partner. GigaTrust’s family of products and services is easy to use and easy to deploy for either the author or recipient of protected content. GigaTrust’s products and services include security solutions for email/attachments and document protection, automated external user provisioning, web content, network file shares, content repositories, discovery enablement, and the BlackBerry smartphone.
