

PRODUCT OVERVIEW

GigaTrust for BlackBerry: Protecting sensitive information — wherever it is

Mobile device challenges:

How can users retrieve RMS-protected email on BlackBerry devices?

Will the content be as secure on the device as it is on the desktop?

Enhancing Microsoft RMS technology with GigaTrust for BlackBerry

You've just completed protecting the content on your organization's desktops with Microsoft® Windows® Rights Management Services (RMS)—a very smart move! But you also have hundreds or even thousands of BlackBerry® devices to protect. In the midst of increased corporate information scrutiny and numerous cases of lost or unprotected data, how will your organization respond to compliance regulations and corporate governance policies that mandate data sharing, while ensuring that data is never at risk? With GigaTrust for BlackBerry—a proprietary Intelligent Rights Management™ solution designed to close your security loophole by protecting content anytime...anywhere.

Intelligent Rights Management is built on the foundation of RMS—bridging the gap between BlackBerry devices and the Microsoft Windows platform. Now your entire BlackBerry user base can have the best of both worlds—the security of RMS technology and the conveni-

ence and mobility of using BlackBerry mobile devices to send and receive protected messages and attachments.

Improve information sharing by providing access to protected content on mobile devices

Unlike secure point-to-point messaging solutions that only protect data while in transit, GigaTrust for BlackBerry, protects content at rest...in transit... and in use, allowing you to securely deliver and persistently protect emails while they are being read on mobile devices. There is no need for a different email address or another mobile delivery mechanism. Additionally, BlackBerry users can apply GigaTrust protection to out-going email responses and messages. If email permissions allow forwarding, attachments remain protected whether they are accessed on a desktop or on a BlackBerry. GigaTrust is the only Microsoft Partner to bring this level of secure interoperability between RMS and your BlackBerry deployment (see Figure 1).

Viewing and protecting content via GigaTrust for BlackBerry

GigaTrust allows authorized users to view protected content on a BlackBerry maintaining persistent protection of the content while in use. GigaTrust for BlackBerry also securely displays the text from attachments.

GigaTrust also allows authorized users to protect content on a BlackBerry leveraging the same policies available to the desktop users of RMS. When authoring an email the user will be able to select from the same list of templates available throughout your enterprise. This insures that you can extend your same corporate policies and procedures beyond your enterprise desktops to your mobile users.

GigaTrust for BlackBerry product benefits

- Eliminates on-the-go security issues by enabling mobile users to send RMS protected email from their BlackBerry
- Keeps business moving with 24/7 secured communications
- GigaTrust for BlackBerry can be integrated with your existing BlackBerry Enterprise Server infrastructure and deployed in just a few short hours. Your entire organization can be reading and creating RMS-protected email within the day.
- Enforces RMS defined usage rights on each BlackBerry device therefore insuring compliance with corporate policy and procedures

Take the next smart move in content protection — with GigaTrust for BlackBerry.

About GigaTrust

GigaTrust is a cutting-edge provider of email and content security software products and services with customers in both the public and private sectors. GigaTrust is the only provider of the Intelligent Rights Management™ solution, which combines innovative, next-generation content security technologies built on the foundation of Microsoft® Windows® Rights Management Services. In February 2003, the firm formed a strategic partnership with Microsoft and formally launched the first in the family of proprietary Intelligent Rights Management products based on the

Rights Management Services (RMS) security platform. GigaTrust is a Microsoft Gold Certified Partner. GigaTrust's family of products and services is easy to use and easy to deploy for either the author or recipient of protected content. GigaTrust's products and services include security solutions for email and document protection, automated external user provisioning, web content, network file shares, e-discovery enablement, and the BlackBerry mobile device.
