

GigaTrust—The trusted name for delivering persistent protection for content at rest...in transit...and in use

Our vision is to protect business content from unauthorized use—no matter where it is, how it travels or who tries to use it

Who we are

GigaTrust is a leading provider of cutting-edge email security and content protection software products and services and is the only provider of Intelligent Rights Management™—an innovative, next-generation content security solution. Intelligent Rights Management is built on the foundation of Microsoft® Windows® Rights Management Services (RMS) technology, enabling intellectual property protection and confidentiality. Bottom line? You can't operate securely today without GigaTrust.

Why you need us

Businesses today need to share data across ever-widening organizational and geographical areas—both within and outside the enterprise. At the same time, they are also increasingly accountable for ensuring that content is properly protected, that it meets compliance and governance regulations, and that it remains private—even when it resides on infrastructures over which they have little or no control. This global information management challenge has led organizations to look for ways to secure the data itself, rather than just the infrastructure that holds and transports it. This is where GigaTrust comes in.

What we offer

GigaTrust's Intelligent Rights Management solution is comprised of a family of products that are easy to use, easy to deploy, and completely transparent to the author or recipient of the email or content. Security is implemented using our products in concert with Microsoft's Windows Rights Management Services (RMS) technology. These products work together in conjunction with information, privacy, compliance, corporate governance, and internal ad hoc policies that are key to the mission-critical success of business conducted in cyberspace. Persistent content security provides the benefits of encryption plus the ability for authors to control the use of email and digital content.

The GigaTrust Intelligent Rights Management family of software products includes:

- **Enterprise Plus.** Allows corporate administrators to establish rules that automatically apply policies that support existing business processes to both internal users and extends these policies outside the corporate network to your supply chain and business partners.
- **GigaTrust for BlackBerry.** Enables reading and control of emails protected with RMS from Microsoft as well as any email created on the BlackBerry device using the security of RMS.
- **e-Discovery Agent.** Provides easy access to information for e-discovery situations in searching archives.

continued >

- **Dynamic File Folders.** Permits documents to be rights-enabled as they are uploaded into network storage systems.
- **Managed Service.** Allows companies that do not want to deploy RMS internally to take advantage of the security RMS offers without the dedicated overhead.

How we do it

GigaTrust has developed proprietary client-server software that provides persistent content protection that is platform and device independent. Our client-server architecture automatically applies policies to Outlook-based email and desktop files, including non-Microsoft Office documents on PCs running Office XP, 2003, or Office 2007. GigaTrust helps extend compliance solutions and security policies to external partners, suppliers, and customers.

What makes us different?

GigaTrust's Intelligent Rights Management approach enables secure anyone-to-anyone collaboration inside or outside the enterprise by persistently protecting content at rest... in transit... or in use for PCs, laptops, and even BlackBerry devices. Our software products ensure that identified content is protected and meets current compliance and corporate governance regulations with

regard to privacy, document retention, monitoring, e-discovery, and notifications. By automating the protection of content, GigaTrust provides a major advance in data security to the market. It allows businesses to control and manage how organizations exchange sensitive information such as intellectual property, contracts, financial data, medical records and customer information.

Who we serve

GigaTrust solves the challenges of content protection and security in both the public and private sectors. With a strong understanding of the need for compliance, privacy, security, and governance, GigaTrust focuses on serving Fortune 1000 companies, small to medium-sized businesses as well as all government agencies. Our vertical market focus is on the healthcare, financial services, manufacturing and public sector industries—all of which are aware of the critical nature of maintaining confidentiality in communications. Our clients depend on us to ensure their content is persistently protected—at rest...in transit...and in use.

The challenge to secure content is global.

The solution is easy.

The answer is GigaTrust.

About GigaTrust

GigaTrust is a cutting-edge provider of email and content security software products and services with customers in both the public and private sectors. GigaTrust is the only provider of the Intelligent Rights Management™ solution, which combines innovative, next-generation content security technologies built on the foundation of Microsoft® Windows® Rights Management Services. In February 2003, the firm formed a strategic partnership with Microsoft and formally launched the first in the family of proprietary Intelligent Rights Management products based on the

Rights Management Services (RMS) security platform. GigaTrust is a Microsoft Gold Certified Partner. GigaTrust's family of products and services is easy to use and easy to deploy for either the author or recipient of protected content. GigaTrust's products and services include security solutions for email and document protection, automated external user provisioning, web content, network file shares, e-discovery enablement, and the BlackBerry mobile device.
