

GigaTrust and Microsoft Windows Rights Management Services

Together ensuring persistent protection. At rest...in transit...and in use.

Our vision is to protect business content from unauthorized use—no matter where or how it travels.

Electronic communications and files are ubiquitous in today's business environment. It's never been easier or faster to communicate across the country or around the world. But the ease of transmitting e-mails and information has also dramatically increased the potential risk of unauthorized viewing and distribution of this information. The consequences of leaks of confidential information can be very costly resulting in lost revenue, compromised ability to compete, diminished customer confidence, and more.

Safeguarding information. It starts with RMS.

Microsoft® Windows® Rights Management Services (RMS) is information protection technology that works with RMS-enabled applications and browsers to help safeguard digital information from unauthorized use both online and offline...inside and outside the firewall. While typical security methods such as firewalls and Access Control Lists (ACLs) help prevent unauthorized access to information and encrypted delivery helps protect information in transport, neither protect information once the authenticated individual has received and accessed the information. That's why organizational security strategies need to be augmented so that persistent protection remains with the information even after it leaves the enterprise network.

Enhancements to RMS with GigaTrust's Intelligent Rights Management

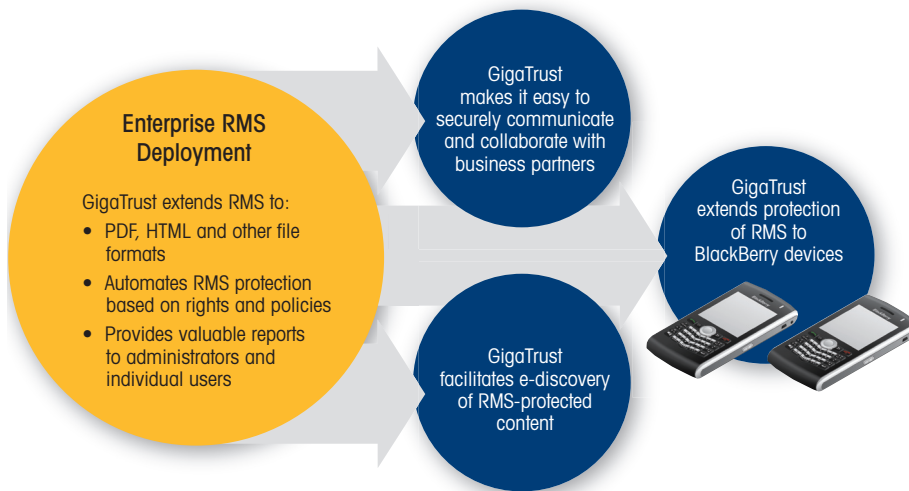

- Policy templates applied using automatic rules
- Protect files via file explorer and desktop
- Protect websites and databases
- Manage and remove unnecessary usage licences
- Cross-enterprise solution with granular control for blocking/adding users
- Read/protect content on BlackBerry devices

GigaTrust is a Microsoft Gold Certified Partner and our teams have worked closely to build a proprietary solution that extends and enhances Microsoft's RMS offering (see Figure 1). GigaTrust's innovative content security solution—Intelligent Rights Management™—is built exclusively on the foundation of Microsoft's Windows Rights Management Services (RMS). GigaTrust's Intelligent Rights Management enables secure anyone-to-anyone collaboration whether inside or outside the enterprise's network. Additionally, no matter where content travels it is persistently protected—even on BlackBerry devices! This means the protection you invoke stays with the content at rest...in transit...and in use.

Figure 1: GigaTrust and Microsoft Windows Rights Management

GigaTrust extends and enhances the core Microsoft RMS offering by providing a family of products that enable secure cross-enterprise collaboration, extend secure communication and collaboration to business and supply chain partners, and automate policy enforcement.

As a trusted Microsoft partner, GigaTrust has worked with RMS since its inception and we are well qualified to recommend and implement a content security solution to meet every data security need and maintain the ongoing security of intellectual property and sensitive company data.

The challenge to secure content is global.

The solution is easy.

The answer is GigaTrust.

RMS is information technology protection

RMS combines Windows Server 2003 features, developer tools, and proven security technologies—including encryption, certificates based on Extensible Mark-up Language (XrML), and authentication, to help create reliable information protection solutions.

- Information workers can define how the recipient may use the information: open, modify, print, forward, etc.
- Custom usage policy templates such as “Confidential–Read only” (that work with RMS-enabled applications) can be applied directly to data, including financial reports, product specifications or sensitive customer data
- Protection still applies—even if a recipient accidentally forwards rights-protected information or even loses the disk with the right-protected files

About GigaTrust

GigaTrust is a cutting-edge provider of email and content security software products and services with customers in both the public and private sectors. GigaTrust is the only provider of the Intelligent Rights Management™ solution, which combines innovative, next-generation content security technologies built on the foundation of Microsoft® Windows® Rights Management Services. In February 2003, the firm formed a strategic partnership with Microsoft and formally launched the first in the family of proprietary Intelligent Rights Management products based on the

Rights Management Services (RMS) security platform. GigaTrust is a Microsoft Gold Certified Partner. GigaTrust’s family of products and services is easy to use and easy to deploy for either the author or recipient of protected content. GigaTrust’s products and services include security solutions for email and document protection, automated external user provisioning, web content, network file shares, e-discovery enablement, and the BlackBerry mobile device.
