

GigaTrust is a cutting-edge provider of email security and content protection software products and services for customers in both the public and private sectors.

Corporate headquarters:

Herndon, VA

Industry:

Software—Enterprise Rights Management

Key partnerships:

Microsoft
RIM BlackBerry
Titus International

GigaTrust was founded in April, 2000 by an experienced team of business leaders in the Enterprise Rights Management industry and is the only provider of the Intelligent Rights Management™ solution, which exclusively extends Microsoft® Windows® Rights Management Services (RMS). GigaTrust uses RMS to help enterprises protect sensitive information at rest... in transit...and in use.

In February, 2003, the firm formed one of the initial strategic partnerships with Microsoft relative to RMS and formally launched the first in the family of Intelligent Rights Management products based on RMS.

GigaTrust Enterprise solutions provide tools to make it easy to provision external parties, track system activity, automate policy enforcement and support file formats such as PDF, HTML and others. GigaTrust's software can RMS-enable file shares in your organization to allow the automatic protection of documents as well as facilitate e-Discovery.

GigaTrust enables secure collaboration with content supply chain partners by extending RMS functionality outside of your organizational network and can even provide outsourcing services for your RMS infrastructure needs. GigaTrust for BlackBerry allows viewing and creation of RMS-protected content on these devices.

GigaTrust's family of content security products

Which products/services will work best for your needs? For content protection, corporate governance and compliance—GigaTrust has got you covered.

GigaTrust products

- **GigaTrust Enterprise Plus**— Allows corporate administrators to establish rules that automatically apply policies that support existing business processes and share select policies with individual team members within your organization as well as extending RMS to supply chain or business partners outside the organization by facilitating secure collaboration and communication on RMS-protected emails and documents.
- **GigaTrust for BlackBerry**— Delivers entire BlackBerry® user base the best of both worlds—the security of RMS technology and the convenience and mobility of using BlackBerry mobile devices to send and receive protected messages and attachments. With GigaTrust for BlackBerry devices, you can read emails protected with RMS from Microsoft as well as any email that you create on the BlackBerry device using the security of RMS. GigaTrust is the **only** Microsoft Partner to provide persistent protection on the BlackBerry mobile device.
- **GigaTrust e-Discovery Agent**— Facilitates e-Discovery in an organization that has deployed Microsoft's Windows Rights Management services (RMS). Now, when protected emails and attachments are processed for delivery to an archival system, they are searchable within an email archive system.
- **GigaTrust Dynamic File Folders**— GigaTrust has extended its Intelligent Rights Management solution for Microsoft's Windows Rights Management Services to rights-enable network file shares throughout your network. Now, documents can be rights-enabled based on corporate security policies as they are uploaded into your network security system.
