

PRODUCT OVERVIEW

GigaTrust Protector for SharePoint 2007

Extends RMS on SharePoint Sites and Protects PDF and CAD Files

GigaTrust Protector for SharePoint 2007 provides:

- Extension of RMS to file formats supported by Adobe Reader (versions 7, 8 and 9), and PTC ProductView (CAD formats such as .ol, dwf, asm, prt, eprt and easm)
- Office 2003/2007 support for blacklisting applications—screen scrapers and remote sharing—while viewing RMS protected files in Microsoft Word, PowerPoint and Excel
- Content access secured directly in native applications
- Content protection applied automatically in SharePoint 2007

The Intelligent Rights Management™ Approach

GigaTrust provides enterprises with Intelligent Rights Management, building value on the foundation provided by Microsoft's Rights Management Services (RMS). Our solutions allow users to access (create, share and collaborate) and protect content **at rest...in transit...and in use** within and outside the enterprise. The combination of RMS from Microsoft and applications from GigaTrust offer you the ability to protect your intellectual property, securely collaborate with partners and meet regulatory and corporate governance compliance goals in more ways, on more platforms and in more places than ever before.

GigaTrust Protector For SharePoint 2007

Microsoft recently rights-enabled SharePoint with the release of Microsoft SharePoint Server 2007. With native RMS support you can rights-protect Office documents from Microsoft Word, Excel and PowerPoint as they are shared and distributed out from a SharePoint site. In addition, GigaTrust has

extended RMS within the SharePoint platform to enable the protection of PDF files as well as a variety of CAD files. Organizations are using SharePoint Server 2007 to facilitate collaboration as well as for content management to implement business processes, and supply access to information essential to an organization's success—and now they can do it securely.

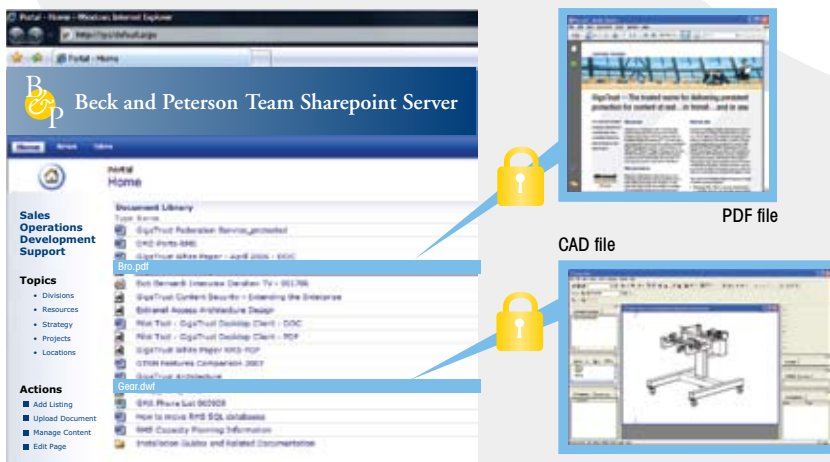

- Project teams share planning and working documents from SharePoint sites created from their desktop.
- Companies collaborate with outside business partners on financial documents, project materials, product design and development, and intellectual property.
- Manufacturers make part designs and assembly schematics available to their supply chain partners to increase speed to market and decrease costs.

While SharePoint 2007 provides the built-in capability to protect documents created in Word, PowerPoint and Excel, it doesn't address popular formats such as PDF or CAD files. That is where the GigaTrust Protector for SharePoint 2007 comes in.

How Does It Work?

GigaTrust has created an Integrated Protector for the SharePoint Server 2007 platform. This means the GigaTrust Protector for SharePoint 2007—the first product of its kind—utilizes a direct interface to SharePoint. It is a custom assembly that plugs into the Intelligent Rights Management (IRM) framework in the Microsoft Office SharePoint Services (MOSS) file format. Our Protector broadens the SharePoint security policy and automatically “extends” RMS protection to content other than Microsoft Office documents downloaded by users. Additionally, when a user uploads documents to SharePoint 2007,

Figure 1. Example of a Corporation's Network Security Team's SharePoint Site

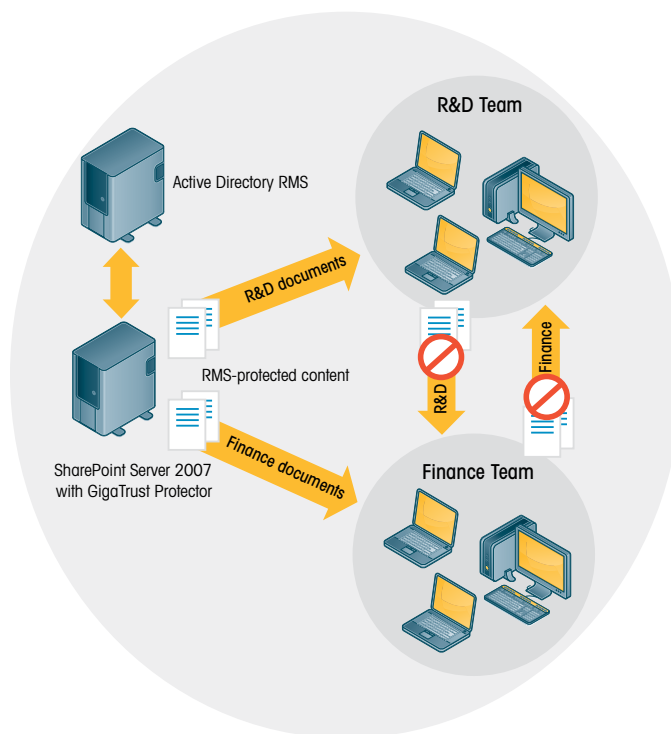

continued >

the GigaTrust Protector removes the protection allowing SharePoint 2007 to save the document. In essence, it extends RMS protection to more files managed in SharePoint 2007.

The GigaTrust Protector for SharePoint 2007 solution is a combination of a server side application that is integrated into the SharePoint servers and our secure client that enforces the rights directly in their native applications—for example, protected PDFs are viewed securely in Adobe Reader. This architectural approach allows for seamless integration into an operating environment with minimal change in user behavior.

Figure 2. How It Works

RMS-protected documents that are accessible via the SharePoint Server can only be viewed, shared, modified, printed, etc., by the functional group that has been assigned those rights. Those documents are rights-protected and those rights extend at rest, in transit, and in use within and outside the enterprise.

The GT Protector for SharePoint 2007 provides the following:

- Extending RMS to file formats supported by Adobe Reader and PTC ProductView (pdf, vsd, mpp, txt and CAD formats like ol, dwf, asm, prt, eprt and easm) with more file formats being added all the time
- Content access secured directly in native applications
- Content protection applied automatically in SharePoint 2007. This approach to protection of intellectual property and compliance with regulatory and corporate governance policies is changing the way people communicate and collaborate in their everyday work life.

Benefits include:

- Customers can derive a higher value for their investment in Microsoft RMS and SharePoint
- Providing security to more forms of an enterprise's intellectual property
- Administration of this new capability is done directly within SharePoint

RMS and GigaTrust Spell Customer Success

More and more companies are required to control distribution and access to the information that runs their business. The integration of Microsoft's RMS into the SharePoint platform serves as a great foundation to address this challenge. With the addition of GigaTrust's Protector for SharePoint 2007, information control can be applied in specific ways for different industries and to different business functions that use varied file formats. These RMS-enabled solutions allow forward-thinking companies to better serve their customers and employees—not by reacting to regulation but by leveraging this cutting-edge technology.

Technical Requirements:

Microsoft Office SharePoint Server 2007
 GigaTrust Protector for SharePoint runs on 32-bit or 64-bit Windows Server 2003 and 2008

About GigaTrust

GigaTrust is a cutting-edge provider of email security and content protection software products and services with customers in both the public and private sectors. GigaTrust is the only provider of the Intelligent Rights Management™ solution, which combines innovative; next-generation content protection technologies built on the foundation of Microsoft® Windows® Rights Management Services. In February 2003, the firm formed the first Rights Management Services (RMS) strategic partnership with Microsoft and formally launched the first in the family

of Intelligent Rights Management products based on the RMS security platform. GigaTrust is a Microsoft Gold Certified Partner. GigaTrust's family of products and services is easy to use and easy to deploy for either the author or recipient of protected content.
