

GigaTrust Dynamic File Folders

GigaTrust's Dynamic File Folders help manage and control access to content by placing protection on the documents themselves, automatically encrypting files such as spreadsheets, presentations, reports and diagrams as they are added to, or modified in, a folder or file share. This ensures protection when documents are stored as well as during distribution or use.

Organizations of all sizes are being tasked to protect a growing quantity of valuable digital information against careless mishandling, unintended distribution or potentially malicious use. The increasing incidences of information theft and the emergence of new legislative requirements to protect certain types of data underscore the need for better protection of digital content.

This content may include dynamic, database-driven reports on an enterprise information portal, confidential email messages, strategic planning documents, military defense reports or other sensitive government files. The growing use of computers to create, work and store this information as well as the introduction of extensive connectivity through networks and the increased popularity of the Internet have made protecting, filing and maintaining enterprise content an essential security consideration.

GigaTrust has extended its Intelligent Rights Management™ solution for Microsoft® Windows® Rights Management Services to rights-enable network file shares throughout your network. Now, documents can be rights-enabled as they are uploaded into network storage systems. Persistent protection can be controlled and administered at the corporate, operational unit, departmental or even at the individual share level. As files are dropped into a file share, persistent protection is automatically applied based on predetermined corporate security policy.

Situation:

As members of your R&D team produce documents for individual projects they store them in project-specific folders on a departmental file share. Your goal is to protect that intellectual capital and rights-enable it for a select group of users that differ by project.

Solution:

GigaTrust Dynamic File Folders allows you to map specific templates to specific folders/file shares with the option to include the share's subfolders. Each template can define a distinct set of usage rights for a specific list of trusted users.

Dynamic File Folders from GigaTrust takes RMS protection beyond the desktop and out to your network-wide document repositories providing a quick and easy way to rights-enable legacy documents. Additionally, the protection persists with the file regardless as to how it is manipulated, distributed or stored.

Benefits of using Dynamic File Folders include:

- Enhances the value of your RMS deployment.
- Rights-enables documents as they are dropped into a file share/folder.
- Automatically applies templates to assign rights for predetermined list of trusted users to all documents in a folder.
- Each file share can be assigned a unique protection policy with the option to include the share's subfolders.
- Rights of access and use of documents are automatically applied to govern rights to view, print, edit, save or even automatically set an expiration date for the document.

With GigaTrust Dynamic File Folders, persistent protection can be controlled and administered at the corporate, operational unit, departmental or even at the individual share level—ensuring that all information is secure at rest...in transit...and in use.

Situation:

Your organization has located and identified a folder of documents that should be protected for a specific group of users.

Solution:

GigaTrust Dynamic File Folders can be used to automatically protect all of the documents in the folder using Microsoft RMS. A policy template is applied to all documents already in the folder as well as any new documents dropped into the folder.

**Ensure protection of digital content
whether stored...distributed...or in use.**

About GigaTrust

GigaTrust is a cutting-edge provider of email and content security software products and services with customers in both the public and private sectors. GigaTrust is the only provider of the Intelligent Rights Management™ solution, which combines innovative, next-generation content security technologies built on the foundation of Microsoft® Windows® Rights Management Services. In February 2003, the firm formed a strategic partnership with Microsoft and formally launched the first in the family of proprietary Intelligent Rights Management products based on the

Rights Management Services (RMS) security platform. GigaTrust is a Microsoft Gold Certified Partner. GigaTrust's family of products and services is easy to use and easy to deploy for either the author or recipient of protected content. GigaTrust's products and services include security solutions for email and document protection, automated external user provisioning, web content, network file shares, e-discovery enablement, and the BlackBerry mobile device.
