

PRODUCT OVERVIEW

GigaTrust Managed Service: Rights management technology enabled while minimizing costs

Challenges outside the enterprise:

Can the security of RMS be extended outside the organization without a content protection company taking possession of your content?

Is it possible to accomplish high-level content security for small to mid-size businesses without large capital investments?

Organizations of all sizes are becoming increasingly challenged in protecting their digital content. As part of an overall security plan, IT departments are being driven to address the problems associated with protecting privacy, sensitive or competitive information, and intellectual property. To respond to this challenge, GigaTrust has developed Managed Service, a suite of client and server application add-ons to Microsoft® Windows® Rights Management Services. GigaTrust's Managed Service provides clients an end-to-end solution that addresses content protection for enterprises and hosted service providers, and helps break down barriers to adoption.

GigaTrust Managed Service — It's a flexible solution designed to ensure your intellectual property is protected.

GigaTrust Managed Service can be implemented as a 100%-managed solution — that means all user accounts are stored in the GigaTrust Managed Service. Or, you can choose the option where only external users are managed — with internal user accounts managed via your internal RMS server and external user accounts managed using the GigaTrust Managed Service.

The **GigaTrust Managed Service (Option I)** offering can be used to establish secure content sharing relationships with outside partners and supply chain businesses. These trusted individuals and companies are hand-picked. If your business contacts are not already part of the service, GigaTrust will provide the tools to make it easy to add business partners to the security of the RMS ecosystem.

GigaTrust's Managed Service (Option II) enables large corporations, as well as small to medium-size business owners, to take advantage of rights management technology without having to deploy and manage the infrastructure themselves. Additionally, users who reside outside the enterprise can be added to this secure environment.

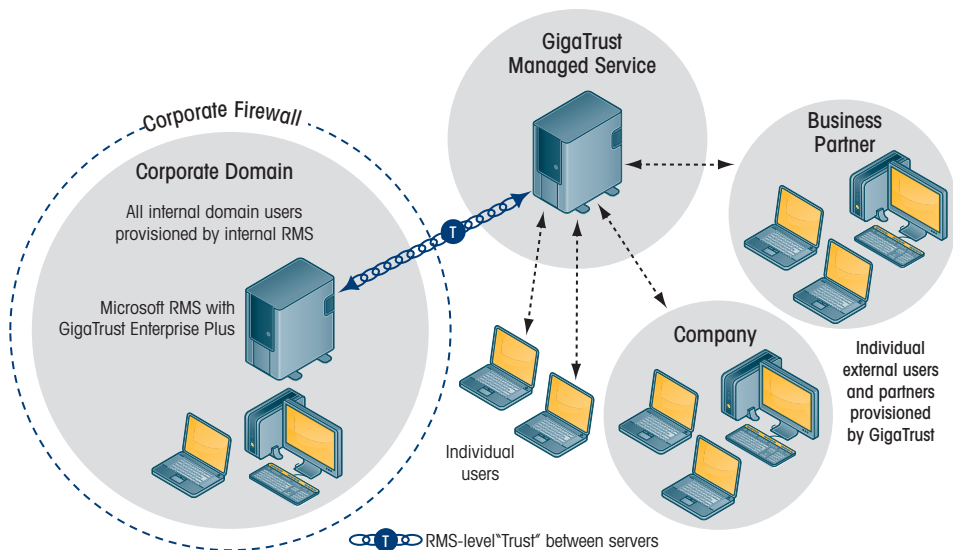

This Managed Service option offers an ideal solution that can be utilized by businesses who work with an enterprise that uses rights management-based protection software. Our hosted solution is designed to minimize capital and management costs. We protect your content without installing servers or requiring you to invest in an RMS infrastructure.

GigaTrust's Managed Services establishes secure content sharing relationships with outside partners and supply chain businesses.

Figure 1. GigaTrust Managed Service used for external business partners

GigaTrust Managed Service does the work for you

The GigaTrust Managed Service is hosted in a fully redundant 24x7 monitored data center—backed by a service level agreement. The Managed Service controls key exchange and user authentication—no data is exposed. Every step possible is taken to ensure that your content is secure for only you and your partners. GigaTrust Managed Service:

- Supports several user environments to accommodate your customers and partners.
- Authenticates external users so you do not have to add them to your authentication directory.
- Manages external user implementations (and their technical problems).
- Provides real-time administration via a web management tool providing administrators with centralized control plus a quick and easy way to add, change and delete users.
- Enables you to protect sensitive information and intellectual property and confidential data.
- Prevents sensitive information losses and breaches on the front end with RMS and GigaTrust rather than invest resources in managing data after a loss has occurred.
- Protects emails and attachments both inside and outside your organization.

Benefits of choosing GigaTrust Managed Service include:

- **Low capital costs**—cost-effective for organizations of 1,000 or less employees or when you want a “try before you buy” service before proceeding with an enterprise-wide deployment
- **Easy installation**—the service can be rolled out in as little as 10 minutes by simply sending an email notification to identified department heads.
- **Business value**—provides a quick and easy way to evaluate and see the business value of the service.
- **Continuous uptime**—the GigaTrust Managed Service is hosted in a fully redundant 24x7 monitored datacenter. GigaTrust stands behind this by providing customers with a service level agreement.
- **No data, only keys**—GigaTrust does not take possession of your content. The Managed Service controls key exchange and user authentication.

The challenge to secure content is global.

The solution is easy.

The answer is GigaTrust Managed Service.

About GigaTrust

GigaTrust is a cutting-edge provider of email and content security software products and services with customers in both the public and private sectors. GigaTrust is the only provider of the Intelligent Rights Management™ solution, which combines innovative, next-generation content security technologies built on the foundation of Microsoft® Windows® Rights Management Services. In February 2003, the firm formed a strategic partnership with Microsoft and formally launched the first in the family of proprietary Intelligent Rights Management products based on the

Rights Management Services (RMS) security platform. GigaTrust is a Microsoft Gold Certified Partner. GigaTrust's family of products and services is easy to use and easy to deploy for either the author or recipient of protected content. GigaTrust's products and services include security solutions for email and document protection, automated external user provisioning, web content, network file shares, e-discovery enablement, and the BlackBerry mobile device.
