

Solutions

GigaTrust, an industry leading provider of Enterprise Rights Management software, delivers persistent content protection and authentication services to both large commercial and government enterprises as well as small-to-medium business (SMB) markets. Persistent content protection represents a major advance in security, as it allows businesses to ‘establish and enforce’ secure enterprise policies to protect everyday content, collaboration and sharing of emails & documents across the Internet on virtually any device. within as well as between organizations.

At present, GigaTrust offers the following solutions:

[GigaCloud®](#)

GigaCloud® is GigaTrust’s *fully-managed* SaaS (Software as a Service) offering providing secure endpoint document protection—delivering email and document collaboration services anytime, anywhere, on virtually any device and any platform with real-time data analytics, reporting and administrative tools.

[GigaCloud® for DoD Supply Chain](#)

For organizations that work with the Department of Defense and create, process, store or transmit CUI (controlled unclassified information), or that provide security protection for these components we have GigaCloud® for DOD Supply Chain. This solution provides for secure endpoint email and document collaboration with numerous features and functions to support enterprise and government users.
