

CAPABILITIES OVERVIEW

GigaTrust's Deployment Services— A Three-Phased Approach

A step-by-step guide to a successful implementation

With the increased complexities of new technologies, common oversights and increased learning curves, you can easily, and, perhaps unnecessarily, extend your time and budget to complete an RMS-deployment project.

GigaTrust's Deployment Services are designed to provide you with everything you need to get started using Microsoft® Rights Management Services (RMS) and GigaTrust's Intelligent Rights Management™ products and solutions to secure your content at rest...in transit...and in use. These services include development of a strategy for the selected products' usage as well as installation, configuration and in-depth knowledge transfer.

Whether you are deploying a minor upgrade, a new application or an entirely new solution, ensuring that your software, systems and network are up and running optimally as quickly as possible is critical to realizing your bottom-line objectives.

Implement quickly—without sacrificing quality

GigaTrust's Deployment Services helps you get started quickly while you continue to stay focused on your core business. We serve as your partner with a solid understanding of the challenges you face and have experience deploying RMS and the GigaTrust Intelligent Rights Management solution quickly—without sacrificing quality. We specialize in rapid deployments to get you up and running while allowing for future scalability. GigaTrust's Deployment Services provides the experience, tools, processes, and the expertise necessary to simplify and speed up your installation so you can take advantage of the technology.

Deployment is accomplished in a phased approach that engages the organization as an integral partner in the design, planning, implementation and operations of GigaTrust's Intelligent Rights Management solution.

The program is comprised of three phases:

Phase I: Design & Requirements Planning. Identifies and ensures core technical and business requirements are met; engages key stakeholders and business/technical leaders as integral partners; and develops and documents overall plan to deploy and operate.

Phase II: Installation, Deployment, Configuration and Testing. Includes the configuration and installation of identified hardware and software and the testing the configuration so that it meets the organization's stated requirements and usability standards.

Phase III: Training and Ongoing Operations. Provides for any needed administrative hands-on training and support for executing end-user training. In addition, GigaTrust makes available an extensive portfolio of support documentation and How-To Guides to get your organization up and running quickly and operating efficiently.
