

GigaTrust for Android: Protecting sensitive information – Wherever it is

Mobile device challenges:

How can users retrieve RMS-protected email on an Android device?

How do I secure my BYOD environment?

Will the content be as secure on the device as it is on the desktop?

Enhancing Microsoft Rights Management technology with GigaTrust for Android

You've just completed protecting the content on your organization's desktops with Microsoft's Active Directory Rights Management Services (AD RMS) - A very smart move! But you also have hundreds or even thousands of Android device users who cannot read the most important content in your organization – the files and emails protected with AD RMS.

Now there is a solution! In the midst of increased scrutiny focused on data loss, organizations are increasingly employing the document level security of AD RMS. With **GigaTrust for Android** – a proprietary Intelligent Rights Management solution – your employees will still have access to that rights protected content on their mobile devices.

GigaTrust for Android is built on the foundation of AD RMS - Bridging the gap between Android devices and the Microsoft Windows platform. Now your entire Android user-base can have the

best of both worlds. The security of AD RMS technology and the convenience of mobility to send and receive your organization's AD RMS protected content.

Improve information sharing by providing access to protected content on mobile devices.

Unlike secure point-to-point messaging solutions that only protect content in transit, **GigaTrust for Android** protects content at rest, in transit and in use, allowing you to securely deliver and persistently protect emails and attachments while they are being read on the device. There is no need for a different email address or delivery system.

Additionally, Android users can apply AD RMS protection to outgoing email responses and messages. If email permissions allow forwarding, attachments remain protected whether they are accessed on the desktop or on another mobile device. GigaTrust is the only Microsoft partner to bring this level of secure interoperability between AD RMS and your mobile infrastructure.

GigaTrust for Android product benefits

- Eliminate on-the-go security issues by enabling mobile device users to send and receive ADRMS-protected content on their Android devices.
- Keep business moving 24/7 by allowing access to your secure content from anywhere including in a BYOD environment.
- Maintain compliance
- HTML viewing capability of emails
- Easy deployment and integration with your existing infrastructure
- Deploy corporate AD RMS templates to all devices- not just desktops.

How it Works

The GigaTrust for Android app works in conjunction with the Mobility Server from GigaTrust to receive incoming RMS protected email and attachments. The Mobility Server is installed on-premise and works with your AD RMS infrastructure, and Exchange service to retrieve any AD RMS protected email. The Mobility Server then securely delivers that content to the user's device. At that point, the GigaTrust for Android app presents the content securely - enforcing the rights governing its usage.

The GT Mobility Server supports the Android, iOS and BlackBerry apps from GigaTrust to provide one central platform that enables all of the major smartphone and tablet providers.

GigaTrust now supports Office 365

As a premiere Microsoft partner, GigaTrust is proud to support the Microsoft Cloud offerings included with Office 365. With our latest generation of products, companies can continue to share content with anyone...anywhere- regardless of where servers and data are hosted.

Our innovative Android solutions allow a full integration with the Microsoft offerings- allowing users with Office 365 email accounts to consume AD RMS protected content on their devices and share that content both inside and outside the organization.

Extend your corporate policies at the next level with GigaTrust and Microsoft AD RMS.

Deployment Requirements:

- Requires Android 4.0 or above
- Requires Exchange 2007 or above with ActiveSync
- Requires GigaTrust Mobility Server
- Mobility Server "Connection fee" paid per device.

in content protection- with
GigaTrust for Android...**

About GigaTrust

GigaTrust is a cutting-edge provider of email and content security software products and services with customers in both the public and private sector. GigaTrust is the only provider of Intelligent Rights Management solutions which combine the innovative, next-generation of content security technologies built on the foundation of Microsoft Active Directory Rights Management Services. In February 2003, the firm formed a strategic partnership with Microsoft and formally launched the first in the family of Intelligent Rights Management products based on Active Directory Rights Management Services.

GigaTrust is a Microsoft Certified Silver Partner. GigaTrust's family of products and services are easy to use and easy to deploy for either the author or recipient of protected content. GigaTrust's products and services include security solutions for email, document protection, ADRMS administration, external user ADRMS enablement, web content, network file shares, e-discovery, and mobile devices.
