

Android App for Office 365 Azure RMS:

Providing RMS protected information on Android platforms – Supports both on-premise and cloud environments

For Office 365 subscribers provides full functionality for AD RMS protected emails and documents

For Protected Emails:

- Supports ActiveSync IRM protocol
- Full email functionality – view, protect, reply and forward.

For Protected Documents and Attachments:

- Supports office docs (Word, Excel, PowerPoint)
- Supports PDF file formats
- View and protect documents from O365 cloud

Enhancing Microsoft Azure Rights Management for Office 365 with GigaTrust App for Android

You've just completed protecting the content on your Office 365 desktop with Microsoft's Azure Rights Management Services - A very smart move! But you also have hundreds or even thousands of Android device users who cannot read the most important content in your organization – the files and emails protected with Azure RMS.

Now there is a solution! In the midst of increased scrutiny focused on data loss, organizations are increasingly employing the document level security of Azure RMS. With **GigaTrust Android App** – a proprietary Intelligent Rights Management solution – your employees will have access to that rights protected content on their Android mobile devices.

GigaTrust Android App is built on the foundation of Azure RMS - Bridging the gap between Android devices and the Microsoft Azure platform. Now your entire Android users can have the best of both worlds. The security of

Azure RMS technology and the convenience of mobility to send and receive your organization's RMS protected content.

Improve information sharing by providing access to protected content on mobile devices.

Unlike secure point-to-point messaging solutions that only protect content in transit, **GigaTrust Android App** protects content at rest, in transit and in use, allowing you to securely deliver and persistently protect emails and attachments while they are being read on the device. There is no need for a different email address or delivery system.

Additionally, Android users can apply RMS protection to outgoing email responses and messages. If email permissions allow forwarding, attachments remain protected whether they are accessed on the desktop or on another mobile device. GigaTrust is the only Microsoft partner to bring this level of secure interoperability between Azure RMS and your mobile infrastructure.

GigaTrust Android App benefits

- Easy deployment and integration with your Azure RMS for Office 365
- Increase worker productivity by enabling mobile device users to send and receive Office 365 Azure RMS protected content on their Android devices
- Keep business moving 24/7 by allowing access to your secure content from anywhere including in a BYOD environment
- Maintain compliance with regulatory requirements
- HTML viewing capability of emails

How it Works

The GigaTrust Android App works in conjunction with Microsoft Azure Rights Management for Office 365 to receive incoming RMS protected email and attachments. The GigaTrust Android App retrieves the keys for decrypting the email and documents, and enforces the rights governing the usage.

The GigaTrust Android App allows the user to reply to messages with RMS protection. The messages can be forwarded if the user is given such rights. Also, the user is allowed to create and send a new RMS protected message.

GigaTrust now supports Office 365

As a premiere Microsoft partner, GigaTrust is proud to support the Microsoft Cloud offerings included with Office 365. With our latest generation of products, companies can continue to share content with anyone...anywhere—regardless of where servers and data are hosted.

Our innovative Android and iOS solutions allow a full integration with the Microsoft offerings – allowing users with Office 365 email accounts to consume Azure RMS protected content on their devices and share that content both inside and outside the organization. GigaTrust solutions also extend Azure RMS protection to PDF file formats.

Extend your corporate policies to the next level with GigaTrust solutions and Microsoft Azure RMS for Office 365.

The GigaTrust Android app enables the use of Azure RMS in the following scenarios:

- RMS Protect emails and attachments from anywhere
- Consume protected attachments on an unprotected email
- Consume emails and attachments while offline.

**Take the next smart move
in content protection - with
GigaTrust Android App...**

About GigaTrust

GigaTrust is a cutting-edge provider of email and content security software products and services with customers in both the public and private sector. GigaTrust is the only provider of Intelligent Rights Management solutions which combine the innovative, next-generation of content security technologies built on the foundation of Microsoft Active Directory Rights Management Services. In February 2003, the firm formed a strategic partnership with Microsoft and formally launched the first in the family of Intelligent Rights Management products based on Active Directory Rights Management Services.

GigaTrust is a Microsoft Certified Silver Partner. GigaTrust's family of products and services are easy to use and easy to deploy for either the author or recipient of protected content. GigaTrust's products and services include security solutions for email, document protection, ADRMS administration, external user ADRMS enablement, web content, network file shares, e-discovery, and mobile devices.
